

Initiate volume/pressure limited ventilation, ($TV \leq 6 \text{ ml/kg}$; Plateau pressure $\leq 30 \text{ cmH}_2\text{O}$, $RR \leq 35$)

Oxygenate, ($FiO_2 \leq 0.6$; SpO_2 88-95%)

Minimize acidosis ($ph \geq 7.3$; $RR < 35$)

Diuresis ($MAP \geq 65$; avoid hypoperfusion)
